

RELEASE NOTES ZEPCAM MANAGER VERSION: 20.0.2.11

Date: February 2022

HIGHLIGHTS:

Automatic redaction of faces and number plates for Zepcam Manager Cloud use

It is now possible to automatically redact (blur) videos within Zepcam Manager.

Improved LDAP functionality

The user import functionality for LDAP integrations has been extended.

Bugfixes

Several bugfixes have been done.

DETAILS

NEW

- Redaction: automatic redaction (blurring) of faces and number plates. Manual optimization is possible. Redacted files will be part of the recordings list. Redaction requires separate redaction server with GPU. Zepcam supports this with a cloud service.
- LDAP Admin: users with the 'Import LDAP' role will be able to import users from the LDAP server. Only available for On-Premise installations.
- User logging search extension: the user logging page has now dropdown boxes with search controls for the devices and user's selection. This makes the user logging page usable for accounts with large amounts of users and/or devices.
- The name of the download file can now be configured in the settings.

IMPROVEMENTS

- Improved watchdog functionality of docking stations.
- Several system stability improvements.

FIXED

- Fix LDAP admin for master account (accountid = 0), admin user could not import users for the account with id=0.
- Update the login to allow special characters like ßäëöè this is necessary for LDAP and German names. It is now possible to login using LDAP and names with special characters.
- Filenames of output files are now always unique.
- Fix and improved docking station offload status.
- Fix remote control for MVB and T1.
